INTELEPIX'S INDIGO-I™ ANNOUNCES FULL GPS INTEGRATION WITH GARMIN™ HANDHELD DEVICES

Glen Cove, New York – April 26, 2010 – Intelipix, LLC's, Indigo-i™ 3D advanced geospatial technology, announces full integration and interoperability with Garmin Handheld GPS Devices.

Users of Indigo-i can now create paths, waypoints within Indigo-i and upload directly to Garmin Mapping Handhelds in 3D.

"Indigo-i™ has undergone considerable development and testing to meet the needs of our clients who use Garmin Handhelds worldwide for navigation", said James L. Pittel, CEO of Intelipix, LLC.

About Intelipix:

Intelipix develops and delivers technological solutions in concert with analytical and engineering services which we have built upon unparalleled experience in mathematics, physics, computational geometry and the latest in computer vision expertise. Together with expertise in various tradecrafts Intelipix excels in providing temporal analysis for critical information operations.

Since our inception in 2003, Intelipix has supplied a range of computer vision products, all based on 3D derived from 2D. Indigo-i™ is a leading technology for the extraction, visualization and interrogation of 3D information from 2D.
